

This presentation contains forward looking information, including estimates of reserves and future pre-tax net revenue and statements regarding exploration and development, including plans, permitting, drilling, well development and anticipated results and timing, the results of internal modelling, estimated decline rates and rates of return, estimated future Caney well costs, future land acquisitions, potential partnerships, risk mitigation strategies, estimated capital requirements, the sufficiency of cash to fund projects and planned capital expenditures, general operational and financial performance in future periods, forecasts, including but not limited to, projected capital expenditures, revenue, production, exit rates and cash flow, our going forward plans and goals and any other forecasts in this presentation.

Reserves estimates and future pre-tax net revenue figures are based on a limited number of wells with limited production history and include a number of assumptions relating to factors such as availability of capital to fund required infrastructure, commodity prices, production performance of the wells drilled, successful drilling of infill wells, the assumed effects of regulation by government agencies and future capital and operating costs. All of these estimates will vary from actual resolutes for recoverable oil and natural gas reserves attributable to any particular group of properties, classifications of such reserves based on risk of recovery and estimates of future net revenues expected therefrom, will vary. The Company's actual production, revenues, taxes, development and operating expenditures with respect to its reserves will vary from such estimates, and such variances could be material. Estimates of after-tax net present value are dependent on a number of factors including utilization of tax-loss carry formation. The company's control to the state of the properties and costs, terested productions, regarding future growth and results of operations, and is based on managements's expectations regarding future growth and results of operations, and is based on shade on a similar to a state of the properties and costs, terested production, capital and results of operations of environmental compliance, future royally rates, commodity prices and foreign exchange rates, future economic conditions and political and regulatory stability in the countries in which KEI operates and globally, and that indications of early results are reasonably accurate predictors of the prospectiveness of the shale intervals, that anticipated results and estimated costs will be consistent with managements's expectations, that new stimulation techniques will be successful, that required regulatory approvals will be available when required, that no unforeseen delays, unexpected geological or other effects, equipment failures, perm

The forward looking information involves significant known and unknown risks and uncertainties, which could cause actual results to differ materially from those anticipated. These risks include, but are not limited to: the risks associated with the oil and gas industry (e.g., operational risks in development, exploration and production; the uncertainty of estimates and projections retaining to production, costs and expenses, and health, safety and environmental risks including flooding floodin

This presentation contains future-oriented financial information and financial outlook information (collectively, "FOFI") about the Company's prospective results of operations including, without limitation, cash flow and various components thereof, all of which are subject to the same assumptions, risk factors, limitations, and qualifications as set forth above. The Company's actual results, performance or achievement could differ materially from those expressed in, or implied by, these FOFI. The Company has included the FOFI in order to provide readers with a more complete perspective on the Company's potential future operations and such information may not be appropriate for other purposes. The Company assumes no obligation to update or revise any FOFI statements, whether as a result of new information, future events or otherwise, except as required by law.

This presentation is for information purposes only and may not be reproduced or distributed to any other person or published, in whole or part, for any purpose whatsoever. This presentation does not constitute a general advertisement or general solicitation or an offer to sell or a solicitation to buy any securities in any jurisdiction. This presentation and materials or the fact of their distribution or communication shall not form the basis of, or be relied on in connection with, any contract, commitment or investment decision whatsoever in relation thereto. The information in this presentation is provided as of the date hereof (unless otherwise indicated) and is qualified in its entirety by the Company's public disclosure documents, which are available on SEDAR at www.earplus.com.

Reference is made throughout this presentation to the Company's Form 51-101 Statement of Reserves Data and Other Oil and Gas Information for the year ended December 31, 2024 (dated March 13, 2025) which was prepared by the Company's independent qualified reserves evaluator, Netherland, Sewell & Associates, Inc. (NSAI) in accordance with National Instrument 51-101 Standards of Disclosure for Oil and Gas Activities. Certain assumptions relating to reserves and estimated future net revenue associated therewith are contained in KEI's most recent annual oil and gas fallings — Form 51-101Fl, which is available on SEDAR at www.sedarplus.com.

Discounted and undiscounted net present value of future net revenues attributable to reserves do not represent fair market value.

KEI's natural gas production is reported in thousands of cubic feet ("Mcfs"). The company may also refer to barrels ("Bbs") and barrels of oil equivalent ("BOE") to reflect natural gas liquids and oil production and sales. Boes may be misleading, particularly if used in isolation. A Boe conversion ratio of 6 Mcf.! Bbl is based on an energy equivalency conversion method primarily applicable at the burner tip and does not represent a value equivalency at the wellhead. Given that the value ratio based on the current price of crude oil as compared to natural gas is significantly different from the energy equivalency of 61, utilizing a conversion on a 61 basis may be misleading as an indication of value.

"Possible Reserves" are those additional reserves that are less certain to be recovered than probable reserves. There is a 10% probability that the quantities actually recovered will equal or exceed the sum of proved plus probable plus possible reserves.

The oil and gas reserves and resources estimates included in this presentation have been prepared in accordance with National Instrument 51-101 — Standards of Disclosure for Oil and Gas Activities ("NI 51-101"), which has been adopted by securities regulatory authorities in Canada and imposes oil and gas disclosure standards for Canadian public issuers engaged in oil and gas activities and differ from the oil and gas disclosure standards of the SEC under Subpart 1200 of Regulation S-K. NI 51-101 permits oil and gas issuers, in their filings with Canadian securities regulatory authorities, to disclose not only proved and probable reserves and production on a gross assis before deducting royalties. The SEC definitions of proved and probable reserves disclosed by LS. companies.

This presentation and KE's other public disclosure documents contain peak and 30-day initial production rates and other short-term production rates. Readers are cautioned that such short-term production rates are not necessarily indicative of long-term performance or of ultimate recovery.

All dollar amounts in this presentation are reported in U.S. dollars unless otherwise indicated

Adjusted funds flow, free cash flow and netback from operations (collectively, the "Company's Non-GAAP Measures") are not measures recognized under Canadian IFRS and do not have any standardized meanings prescribed by GAAP. The Company's Non-GAAP Measures are described and reconciled to IFRS measures in the management's discussion and analysis which are available under the Company's profile at www.sedarplus.com.

The mathematical equation defining helphore before the factor). The b factor determines the initial steepness of the decline curve. The Director of the decline care (Di), and the hyperbolic exponent (the b factor). The b factor determines the initial steepness of the decline curve. The Director of the rate at which the voscuring declines.

#### Non-GAAP explanatory:

Adjusted EBITDA, free cash flow and netback from operations (collectively, the "Company's Non-GAAP Measures") are not measures recognized under IFRS and do not have any standardized meanings prescribed by IFRS. Management of the Company believes that such measures are relevant for evaluating returns on each of the Company's projects as well as the performance of the enterprise as a whole. The Company's Non-GAAP Measures may differ from similar computations as reported by other similar organizations and, accordingly, may not be comparable to similar non-GAAP measures are represented by such organizations. The Company's Non-GAAP Measures should not be construed as alternatives to net income, cash flows related to operating activities, working capital or other financial measures determined in accordance with IFRS, as an indicator of the Company's performance.

Adjusted EBITDA is calculated as net income before interest, taxes, depletion and depreciation and other non-cash and non-operating gains and losses. The Company considers this a key measure as it demonstrates its ability to generate cash from operations necessary for future growth excluding non-cash items, gains and losses that are not part of the normal operations of the Company and financing costs..

AIG #000)	Year ended December 31,		
(US \$000)	2024	2023

Finance expense	4,174	3,836	
Stock based compensation	1,075	790	
General and administrative expenses	5,636	4,243	
Depletion, depreciation and amortization	15,892	15,009	
Other income	(127)	(2)	
Operating netback	50,291	44,702	
Netback from operations per barrel	\$38.54	\$42.97	

#### Non-GAAP explanatory continued:

Netback from operations per barrel and its components are calculated by dividing revenue, less royalties and operating expenses by the Company's sales volume during the period. Netback is a non-GAAP ratio but it is commonly used by oil and gas companies to illustrate the unit contribution of each barrel produced. The Company believes that the netback is a useful supplemental measure of the cash flow generated on each barrel of oil equivalent that is produced in its operations. The following is the reconciliation of the non-GAAP ratio netback from operations to net income (loss) from continuing operations:

### (US \$000)

## Kolibri Global Energy Inc.

A premier energy company focused on identifying, exploring and the exploitation of high quality resources. Through its wholly owned subsidiary, Kolibri Energy US Inc. the Company owns and operates the Tishomingo Shale Oil Field in Oklahoma

### **Proved Reserves Grew by 24% in 2024**

- Financially Stable Low Debt
- Continued cash flow growth
- High Netback production (1)
- Fully funded 2025 Drilling program (cash flow & existing line of credit)
- High Quality Asset 2P reserves of 53.6 million BOE's (2)
- Large ratio of PUD vs PDP Reserves

- Focus on increasing shareholder value with low-risk drilling
- III Highly experienced and competent management team and Board
- Strong Corporate Governance, with focus on Safety & **Environment**
- Kolibri Stock undervalued on reserve value basis NASDAQ: KGEI

## **Tishomingo Field History**

**M**Originally drilled the Woodford Shale

**■Drilled and participated in 40 wells holding ~12,500 acres** 

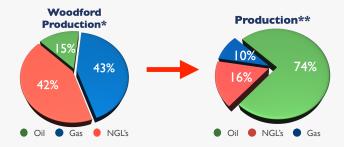

Sold the Woodford to XTO/Exxon for \$147 million

**M**Retained the rights to the Caney and upper Sycamore

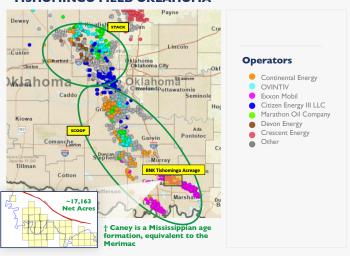

**■Grew** the acreage position to over 17,000 acres

Reserves of 40.2 million Proved, 53.6 million 2P(1)

# Transformed from a mainly Natural gas and NGL producer into a liquids rich producer

### **TISHOMINGO FIELD OKLAHOMA**

(1) Form 51-101F1Reserve Report 12/31/24 as disclosed in other slides NSAI Reservoir engineers \* 1st Qtr 2013 \*\* 2024 Year Average

## **2025 Tishomingo Plan**

- Development of Field continuing in 2025
- Forecasted production growth of 29% to 47% over 2024
- 2nd Quarter planned activity
  - Drilling 4 1.5-mile lateral Caney wells
  - Completing the 4 1.5-mile lateral Caney wells
  - **Drilling East Side well** (Forguson 17-20-3H)
- 3rd & 4th Quarter planned activity
  - Completing and testing the economics of East Side well
  - Drilling 2 1.5-mile lateral Caney wells
  - Completing 2 1.5-mile lateral Caney wells and 2 1-mile Velin wells
- Continue with the constant strive for improvement with all of the above

### **New Well IRR's**

(1) Assumes 1.5 mile lateral, \$6.5 million cost of wells, NGL prices 39% of oil, \$4 per MCF for Gas, operating expenses, and other assumptions from NI 51-101 12/31/24 Year-End report, with operating expenses not escalated. Internal rate of return (IRR) is calculated from the decline curves from NI 51-101 12/31/24 Year-End report for Lower Gas Oil Ratio ("GOR") and Higher GOR locations in the proved future development area. 2025 planned wells are a combination of both the lower GOR and Higher GOR locations

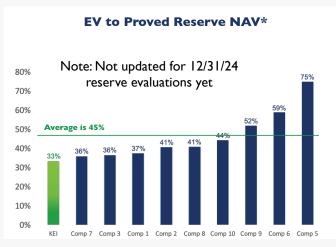

## **Tishomingo Field - East Side**

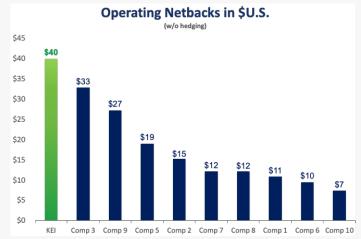

- Forguson 17-20-3H well
- Infrastructure in place Gathering system about 1/2 mile away
- **Kolbri is operator and has a ~46% working interest**
- ~3,000 net acres on the East side
- East side acreage is currently classified as contingent resources
- Caney target has similar characteristics and thickness as the heart of Kolibri's proved acreage in the main part of the field, except that it is shallower
- If the Forguson wells proves to be economic it can lead to many additional development locations

### **Management Team**

#### WOLF E. REGENER, President and CEO

Mr. Regener brings over 36 years of conventional and unconventional E&P experience to Kolibri Global Energy Inc.. In his role as Executive Vice President of Bankers Petroleum Ltd., and President of its wholly-owned US subsidiary, Mr. Regener was instrumental in the formation of BNK Petroleum Inc., (now Kolibri) and it's subsequent spin-off from Bankers. His career also includes key senior executive positions with Tartan Energy, Alanmar Energy, and R&R Resources, which involved heavy oil and enhanced recovery operations. With an extensive operations and finance background, Mr. Regener has been at the forefront of Kolibri's acquisition of unconventional projects on an international scale and development of the Company's Tishomingo Field interests. He holds a Business of Economics degree, with an emphasis on Computer Science, from the University of California, Santa Barbara, and has served on the Board of Directors of the California Independent Petroleum Association for over twenty four years.

#### GARY W. JOHNSON, CFO

Mr. Johnson is a CPA and brings over 30 years of accounting and finance experience, 20 years in the oil and gas industry, to the Company. Prior to joining Kolibri, Mr. Johnson's career has included roles with Occidental Petroleum Corporation, a Fortune 200 NYSE traded company, as Director of Technical Accounting, where he was responsible for the company's public filings and worldwide accounting compliance, Ascent Media Corporation as Assistant Controller where he oversaw corporate accounting, financial reporting and consolidations and Western Atlas where he was Manager of Financial Reporting and Analysis. Mr. Johnson graduated from Loyola Marymount University with a Bachelor of Science in Accounting and he also holds an MBA from Auburn University.

### DAN E. SIMPSON, Director of Engineering

Mr. Simpson brings 30 years of experience in petroleum engineering, including operations, management, reserve and economic evaluations, acquisition and divestitures, and reservoir simulation to the Company. Prior to joining Kolibri he has held the role of Vice President or Head of Engineering for 20 years and worked as an engineer with firms including Schlumberger and MHA Petroleum Consultants. In North America he has extensive experience in the Rockies, West Texas, the Mid-Continent and California. Projects in these regions have included both conventional and unconventional production, EOR, gas storage and coal bed methane. He has worked internationally in numerous Countries. Mr. Simpson has a Bachelor of Science in Petroleum Engineering from the Colorado School of Mines and has completed extensive graduate work in Petroleum Engineering.

### **ALLAN HEMMY, Senior Geologist**

Mr. Hemmy has over 10 years of experience in oil & gas exploration and development, with extensive unconventionals experience in the evaluation of source rock reservoirs and other tight reservoirs. His expertise includes total petroleum system evaluation, basin analysis, sequence stratigraphic interpretation, and petrophysical evaluation of log and core data. Mr. Hemmy holds Bachelor degrees in Geology and Biology from the University of Kansas.

TSX: KEI

### **Board of Directors**

#### **EVAN TEMPLETON.** Chairman

Mr. Templeton is the Founder and Principal of WestOak Advisors, LLC, which provides capital markets services to middle-market public and private companies. He is also a Managing Director at Odinbrook Global Advisors, LLC, which provides advisory services to companies in transition or financial distress. For over 25 years, Mr. Templeton's financial career has focused primarily on the High Yield and Leveraged Loan markets as a Senior Credit Analyst covering the Exploration & Production, Midstream, Olifield Services and Refining sectors. Prior to his current roles, Mr. Templeton was a Managing Director in the Leveraged Credit Trading group at Jefferies, where he led the Strategy Group. Prior to Jefferies, he held similar roles at RBC Capital Markets and FleetBoston Robertson Stephens. In addition to providing industry and company commentary, Mr. Templeton played key roles in the diligence, structuring and marketing of over \$20 billion of left-lead high yield and leveraged loan transactions. He graduated from Franklin & Marshall College with a Bachelor of Arts degree in History.

### **DOUG URCH, Director - Chair of Audit Committee**

Mr. Urch is a Chartered Professional Accountant (CPA) and a member of the Institute of Corporate Directors (ICD) with a degree in Commerce. He has been involved in the oil and gas business for over 35 years including several executive leadership roles in the industry, specializing in financial management guidance. Mr. Urch is currently the Executive Vice President & Chief Financial officer for Petro Tal Corp since 2019 after serving as a Director and Board Chair from 2017 to 2019.

### **DAVID NEUHAUSER, Director**

Mr. Neuhauser is Founder and Managing Director of Livermore Partners based in the Chicago suburb of Northbroook, Illinois. Livermore Partners LLC is a private investment firm serving institutions, high-net worth individuals and private equity sponsors.

David has extensive experience in capital markets and M&A activity and has over 20 years of experience in strategic investments including Oil & Gas. Prior to founding Livermore, Mr. Neuhauser was founder and President of Loren Holdings Incorporated, a company focused on strategic investments across a broad group of industries. Mr. Neuhauser was a longtime member of the CME Group (NYSE:CME) as well as the National Futures Association. He received his B.A. with concentrations in Economics from Northeastern Illinois University and has conducted Graduate studies in Economics and Sociology from Roosevelt University of Chicago. Mr. Neuhauser is a current Board member of Jadestone Energy an Asian-based and London listed energy company. He is also on the Board of Directors of the Shareholders Gold Council.

### LESLIE O'CONNOR, Director

Mrs. O'Connor was the Managing Partner and is now an associate on a consulting basis of MHA Petroleum Consultants LLC, a petroleum reservoir management consulting firm. Mrs. O'Connor has more than 30 years of worldwide petroleum engineering experience, including property evaluation, reservoir and economic evaluations, petrophysical studies and expert witness testimonies. Mrs. O'Connor also previously held positions with Sproule Associates Inc, Geoquest Reservoir Technologies, Thums Long Beach Company and Dresser Atlas. She is a member of the Society of Petroleum Engineers where she is the recipient of the 2014 SPE Regional Service Award, the SPE 1995 Regional service award as well as the 1990 Denver Section Service Award. She has an extended BSc Geology with Applied Engineering degree from North Arizona University as well as Graduate Studies in Petroleum Engineering from the Colorado School of Mines.
